Read each clue, then write **one letter in each blank** to spell the math vocabulary word. Stuck? Check the word bank at the bottom!1

A math rule that takes an input and grows it into an output — like turning a line's length into an area!

2

Two flat surfaces that meet at a perfect 90° angle, like the floor and a wall meeting in the corner of a room.

3

A direction you can measure in — like length, width, or height.

4

How much space a 3D solid takes up: Length × Width × Height.

5

The flat space inside a 2D shape: Length × Width.

6

How far apart two points are, measured along one dimension.

7

The way smaller pieces build up into something bigger — like words building into sentences.

8

To flip or reflect a shape across a line or a plane.
